

The Fastest Way to Deliver Secure APIs

WHAT IS LUNCHBADGER?

A Kubernetes-native, microservices and serverless platform for delivering APIs.

- FAST DEVELOPMENT
- ADVANCED SECURITY
- API GATEWAY
- RUN ON ANY CLOUD
- ENTERPRISE CONNECTORS
- DEVELOPER PORTAL

APIs Power New Revenue Streams

Companies today are under constant pressure to support new customer acquisition and partner enablement channels or risk losing these opportunities to competitors or more agile startups. LunchBadger helps businesses seize revenue opportunities with the power of APIs.

- Fast Time-to-Market
- Agile Development
- New Channel Monetization
- APIs as a Strategic Advantage
- Attract and Engage Developers
- Measure, Meter and Throttle

How LunchBadger Helps Enterprise Architects

LunchBadger accelerates your API strategy without compromising on security, scalability or connectivity to legacy datasources.

Fast Development A single UI for developing and managing microservices and serverless functions from beginning to end.

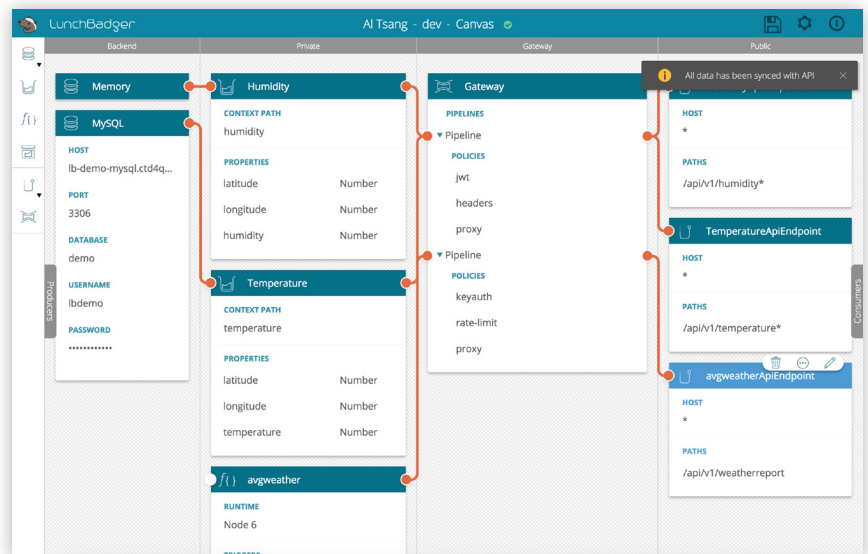

Advanced Security Native support for OAuth2, dynamic policies for request/response pairs, plus basic and key authentication.

API Gateway Built-in support for the highly-extensible, open source Express.js Gateway.

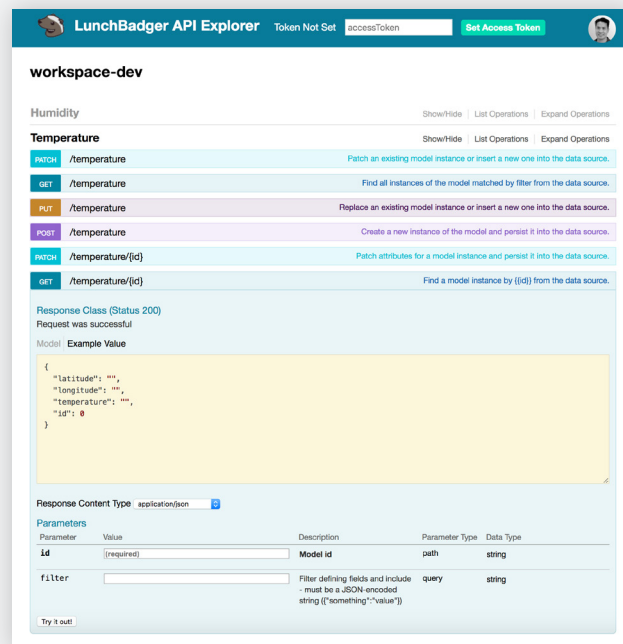

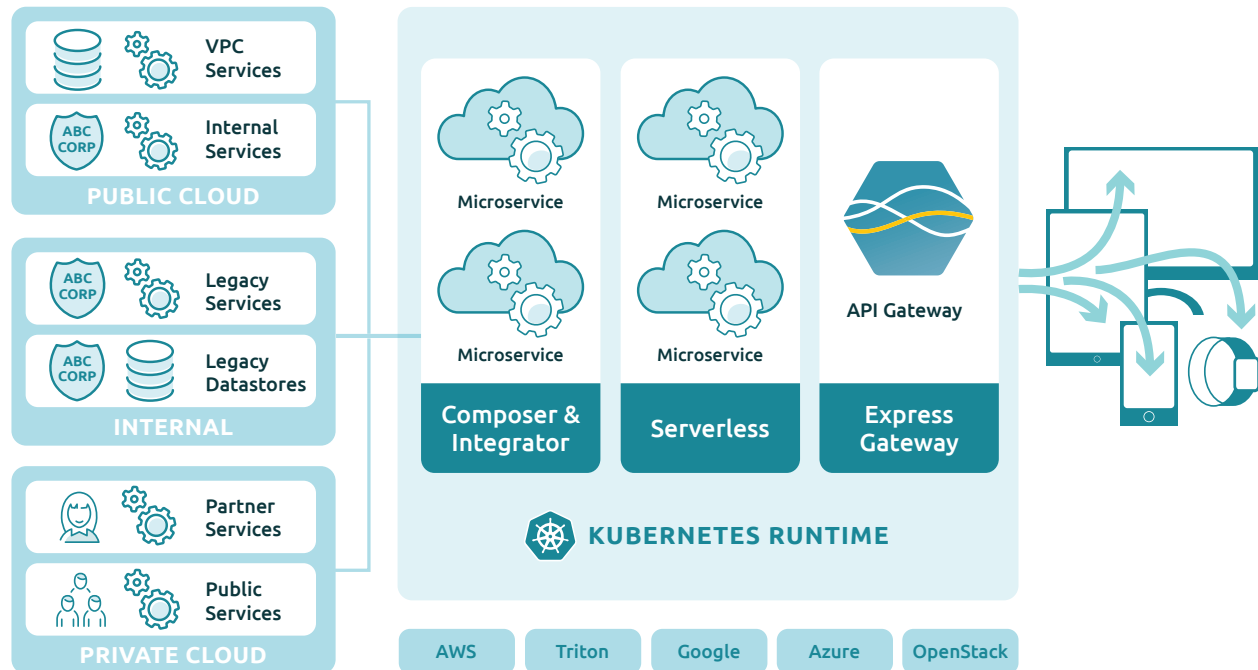

Run on Any Cloud Kubernetes-native means you scale on any cloud, public or private.

Enterprise Connectors Native support for both modern and legacy datasources like MongoDB, MySQL, Redis, Oracle and SOAP

Developer Portal Engage your community with LunchBadger's built-in portal that ships as a microservice in Kubernetes.

The LunchBadger Architecture

How LunchBadger Works

LunchBadger is an all-in-one development and management platform for delivering APIs with microservices and serverless functions. It takes just minutes to deploy LunchBadger on the cloud of your choice using its self-contained Kubernetes runtime. Using LunchBadger's intuitive "drag and drop" UI you compose, connect, secure, deploy and document complex APIs quickly. LunchBadger has built-in support for all the popular authentication protocols, plus connectivity to both modern and legacy datasources.

ABOUT LUNCHBADGER

LunchBadger enables Global 5000 companies execute their API strategies quickly and securely. The LunchBadger platform is a Kubernetes-native, microservices and serverless platform which includes support for the open source Express API Gateway. LunchBadger is based in San Francisco and is backed by Pelion Ventures.
